ABOUT US

In 2019, Sumenep was recorded as the district with the highest reduction in stunting rates in Indonesia. The stunting rate fell from 52.5 percent in 2018 to 34.3 percent in 2019. This achievement is necessary in order to achieve the stunting target of below 14% set by the Government of Indonesia. Unfortunately, there is no definite information that can be gathered about how this stunting reduction occurred evenly across the Sumenep area. The geographical condition of Sumenep which consists of a group of small islands is often reported to cause health disparities. This community service will initiate the collective behavior of the Kangean community to be active and independent in preventing stunting. The community will be actively involved in every community service process so that they can exchange information and feelings that support the formation of this collective behavior.

ACDH (Airlangga Community Development Hub) Faculty of Public Health, Airlangga University together with WUACD (World University Association for Community Development) attended and carried out community empowerment in Arjasa District, Sumenep Regency, Kangean, Madura, East Java. We give this community empowerment a name JATI EMAS (Arjasa Bersinergi dengan Hati menuju Eliminasi Masalah Stunting). The aim of this program is to engage students, stakeholders and community to develop community knowledge and skills in stunting prevention.

LOCATION OF COMDEV

TRIP SUMMARY
